

Meeting Agenda

Date: 2014-04-08

Participants: David Oskarsson, Emma Nyborg, Kristofer Yffén

1. Objectives

Kristofer need the generator to output a list of Note instead of a String. David should fix this.
Choose correct ABC-library

2. Reports

The bug we mentioned in the previous meeting where only one song was read is now solved.
The problem was simply where we created new Melody-objects that pointed at the same single list.

3. Discussion items

(a) How do we do...?

To generate new music we use Markov chains.

(b) What to do...?

Connect our implementations with our GUI.

(c) Why is...?

To make it easy and smooth to use our program.

4. Outcomes and assignments (5 min)

Kristofer will expand the MusicTheory-class, which is a new utility class and expand the alphabet..

David should continue with the ABC2MIDI parsing and change the tuneBuilder from string to list<notes>

Emma should continue to connect the GUI to the model.

5. Wrap up

Next meeting is thursday at 12.
